

The Datasheet of Fiber Adapter

Fiber adapter

An adapter is a mechanical device designed to align fiber-optic connectors. It contains the interconnect sleeve, that holds the two ferrules together.

Features:

Low insertion loss, high return loss
Good compatibility
High precision of mechanical dimensions
High reliability & stability
Ceramic or Bronze Sleeve
PC、APC、UPC optional
Simplex / Duplex

Application:

Local Area Network
CATV System
Telecommunication Networks
Equipment Test

FC fiber optic adapters are with metal or plastic housing, single-mode FC adapters are with zirconia sleeves, multi-mode FC adapters are with bronze sleeves.

ST fiber optic adapters are all threaded type with metal or plastic housing, single mode ones are with zirconia sleeve and multimode ones are with bronze sleeve.

LC Adapters were developed by Lucent Technologies. They are composed of a plastic housing with an RJ45 push-pull style clip.

SC fiber optic adapters are flange type, single mode adapters are with zirconia sleeve while multimode fiber adapters are with bronze sleeve.

MU adapters are approximately half the size of an SC coupler and utilize zirconia sleeves for precision alignment.

The E2000 connector and adapter have set the standard for optical fibre interconnect .With a shutter on both the connector and adapter to prevent laser eye damage the E2000 offers features no other connector can match. The E2000 also has a latched lever mechanism to prevent accidental disconnection.
